For fluorescent lamps with black-glass bulbs see page 6.09
For QUICKTRONIC® electronic control gear see Section 11

OSRAM FLUORA® – light for healthier plants and for aquariums

The light from OSRAM FLUORA® fluorescent lamps has an emphasis at the blue and red ends of the spectrum so it is ideal for promoting photo-biological processes in plants. The result is healthier plants.

OSRAM FLUORA® lamps are used wherever plants do not receive enough natural daylight, for example over feature planting in shopping centres, offices, hotels and the home, and also for florists' shops, greenhouses and aquariums.

Plants really thrive under FLUORA® light even in rooms where there is little or no natural daylight.
